IS YOUR PART TOO HEAVY ??

United Resin Corporation is pleased to introduce Aero-lite Resin and 205 Hardener which is approximately **52% lighter** than conventional potting and encapsulating epoxy systems. The material was formulated for those applications needing reduced weight as required in aerospace, automotive and electronic applications. It is a two component epoxy system which has low density, low mixed viscosity, low shrinkage and low CTE. In addition, it exhibits very good thermal shock, impact resistant properties and very good cosmetics when cured. Since its components are hydrophobic (water repelling) moisture absorption is negligible.
