

Optik-Bond High Performance Epoxy Adhesives

 The Optik-Bond adhesives were formulated for potting and sealing optical connectors, fibers, lenses and other optical components.

 **Optik-Bond CCA with 125**
Low viscosity and a fast curing system. Designed for potting and sealing optical connectors, fibers, lenses and other optical components.

 **Optik-Bond CCA with 205**
Low viscosity, fast curing system with excellent impact absorbing properties.

 **Optik-Bond CCA with AS-100**
Low viscosity, fast curing system with excellent impact absorbing properties.

 **Optik-Bond CCA with 929**
Low viscosity system, with a longer work life.

 **Optik-Bond ECA with 929**
Medium viscosity, impact absorbing system, with a longer work life.

All Optik-Bond adhesives are unfilled two component epoxy systems that bond to aluminum, ceramics, glass and various other substrates.
